THE ZR-24/7

Providing professionals with a perfect canvas of light-enhancing haze

This high-precision DMX haze generator, the first in a new range of professional hazers, uses state-of-the-art digital technology and a high-velocity radial blower. Employing the latest in innovative ECO-Mass vaporizing system design and VGA (variable geometry airflow) it is capable of producing very small highly refractive airborne particles to deliver the perfect, optically translucent canvas of haze.

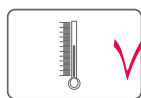

The compact and rugged design makes it the perfect tool for all professional applications ranging from theatre and television to large-scale clubs and tours - in fact any event

where a truly reliable hazer is needed to create a light-enhancing canvas of water-based haze for long periods.

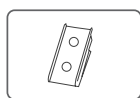

The 3-digit LED user interface and state-of-the-art digital electronics gives you complete access to DMX set-up, density and output control, allowing you the choice of either continuous operation or precision digital timing. The amount of haze dispensed can be adjusted via on-board 3 and 5-pin fan speed and haze output control and a variable temperature control enables users to utilize different Jem fluids for different effects.

EFFECTOLOGY

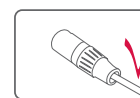

ZR 24/7 HAZER

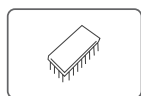

Direct Thermal Protection Device

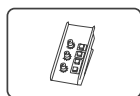

Compact Timer Remote

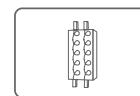

On-Board DMX

Electronic Pump Ramping

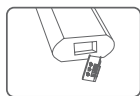

Multifunctional Remote

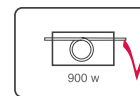

D-Tec, Hi-Mass Vaporizing System

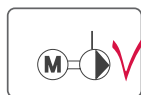

Low Fluid Cut-off System

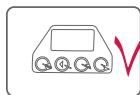

On-Board Remote System

Heat exchanger

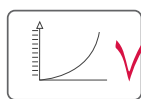

Sequential Pump System

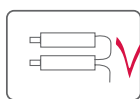

On-Board LED Display

Fluid container

Soft Start Electronics
